# Transforming Project Management

Bogusław Reich

Product Owner, XTRF

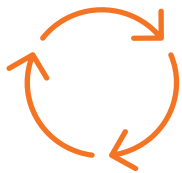

# PM's role has changed

- CAT tools & MT helped deliver faster
- Automation helped reduce time on repetitive tasks
- Templates streamlined the workflows
- Integrations made the processes seamless

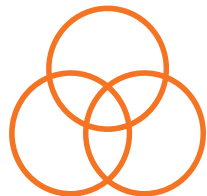

**PMs' focus is now on monitoring & reacting, handling more complex tasks, and building relations.**

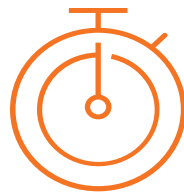

# Communication with vendors consumes most of PMs' time

Ensuring proper information flow, coordinating vendors, negotiations, queries management, ...

Each project is different in context, involves different people

Time is essential, responsiveness is the key

One-to-one & one-to-many communication

Emails take time, phone calls are not always efficient

# Chat communicators as a solution

- Modern way of communication (less formal, quicker than emails)
- Easily available web and mobile applications

- Popular communicators are not always fit for purposes of the industry
- Common accessibility across all your vendors (how to convince them to use your tool)
- Communication in context of a project (automated chat rooms creation)
- Searchability & auditability
- Unwanted direct communication between vendors
