Concordance with specific numbers

- Searching in the TM via the Concordance Search will show matches with different numbers.
- If you want to search for a specific number, uncheck the box to "Find different numbers, too".

Concordance

LiveDocs

- Alignments and reference material
- Shortcuts to open a webpage from the LiveDocs list
 - Pages you often visit
 - Information for translators about the client they translate for

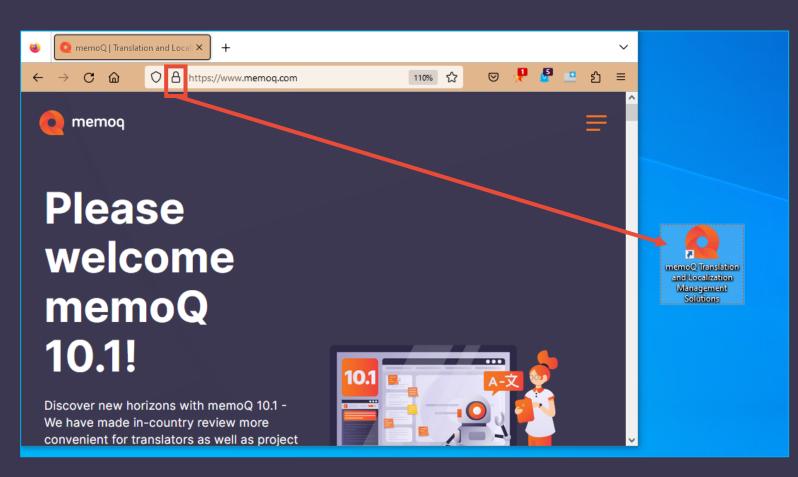

Creating a Shortcut from a Webpage

- Open the page in a browser
- Drag and drop the page info to your desktop (use the lock icon)
- Double-click the icon to open the page in the browser

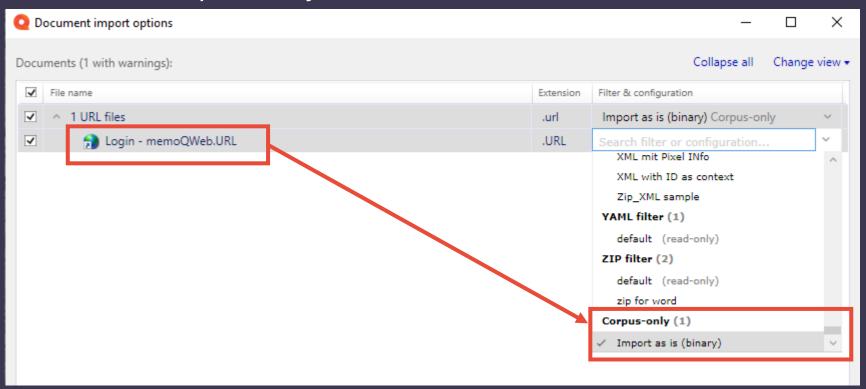

LiveDocs

- Add the Shortcut File to the corpus
 - Use "Import Document"
 - Select the "corpus-only" filter

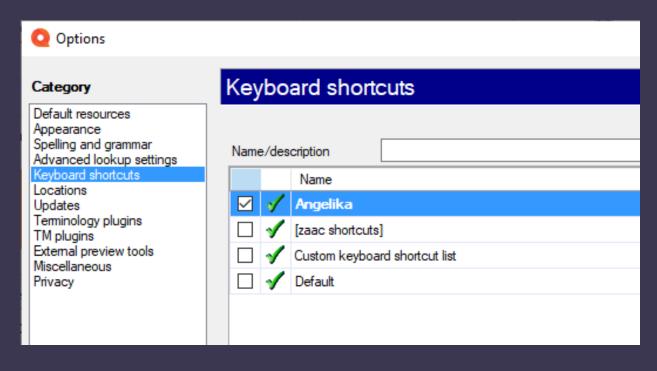

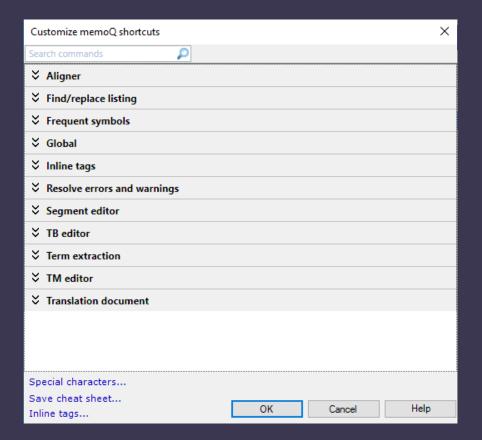

Shortcuts

Create your own shortcut list and adapt the shortcuts.

Shortcuts

 Create your own shortcuts – to open specific windows or dialogs.

Open QA dialog

Jumping between windows

Open Views dialog

114	Global	Restore Connection To Server	
115	Global	Review Changes And Conflicts	
110	Global	Run QA	CTRL+ALT+Q
117	Global	Send Translation To Content Source

Special characters, tags

 Add shortcuts to type special characters that are not on your keyboard

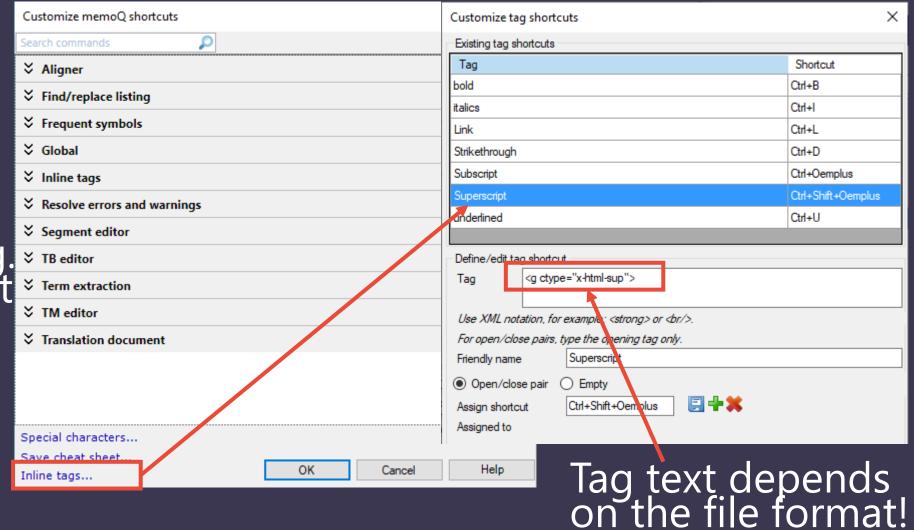

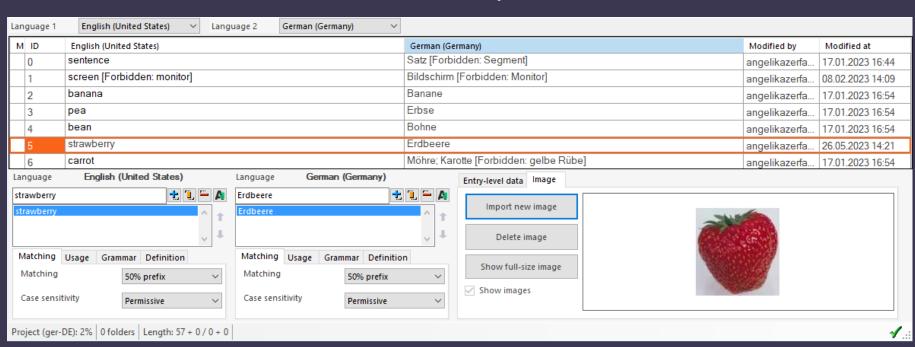

Special characters, tags

Add tags
 to use in
 the target
 if they are
 not there
 in the
 source, e.g.
 superscript
 for XML
 files

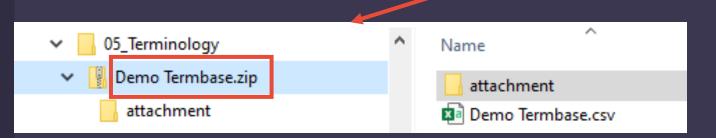

- Images in term bases (memoQ term base)
 - Export your term base to CSV with images
 - memoQ creates a ZIP file containing a folder with the images and the CSV file (does not work for Excel as export format)

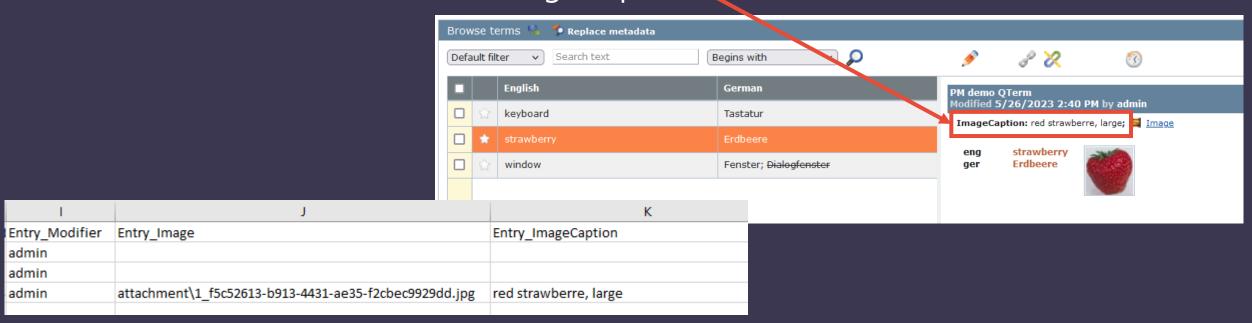

• Check the box "include images"

Term base export settings File C:\00_demo files EN\05_Terminology\new.zip						
Export as CS\	v (Export as XLSX				
Export as C3	v	Export as ALSA				
✓ Include image	es					
memoQ will creat	e a .zip file containing the	.csv file and a folder of the images.

Example of	use	Tem_Example				

- Images in term bases (QTerm)
 - Export your term base to CSV with images
 - memoQ creates a ZIP file containing a folder with the images and the CSV file (does not work for Excel as export format)
 - QTerm also allows an image caption

Default setting

Terminology

 Inserting terms from the results list with or without a following space.

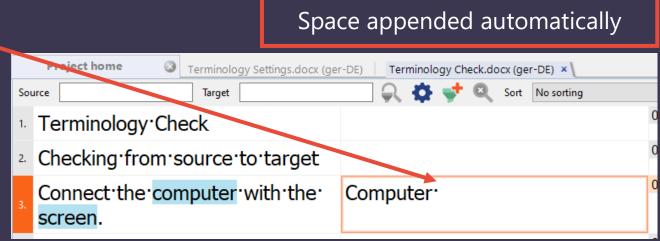

Translation results No sorting ource computer Computer Terminology Check computer Double-click to insert Checking from source to target Right-click for more options (Ctrl+1) screen Monitor screen Computer Connect·the·computer·with·the· screen. 0% Checking from target to source

Activate setting in Options -> Miscellaneous

 Longer terms hide shorter terms (click the eye once to show hidden matches)

 Double-click the eye symbol to switch the option on or off

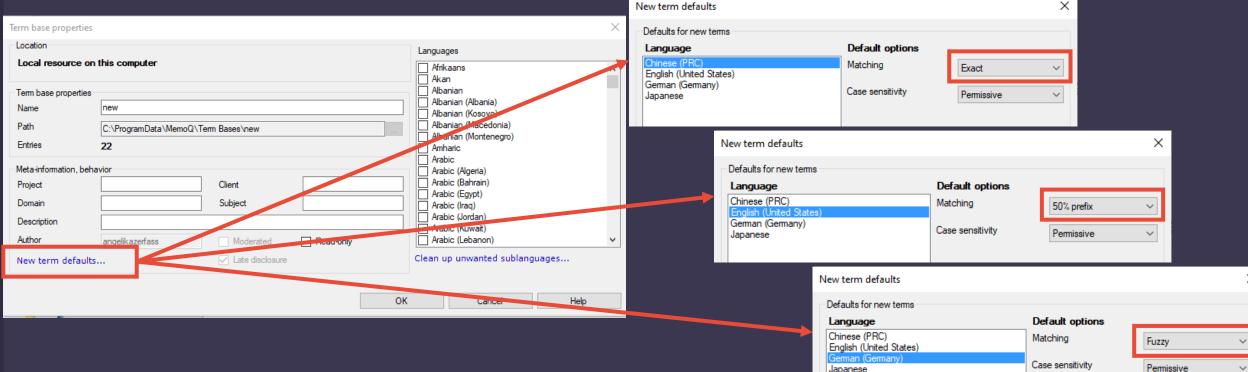

• memoQ is clever enough to show the shorter terms as well, if there is a forbidden term.

 Adding new terms with pre-defined settings for matching and case sensitivity (available in memoQ term bases in the properties and QTerm term bases in the settings)

- Where does this term come from?
 - If the project contains a term extraction with confirmed terms in the candidates list, the results window can show these terms (one or both languages) with a spade symbol (= term mining)

Project Templates

 When you receive files with the same file format from the same client, but depending on what content they have they need different import filters.

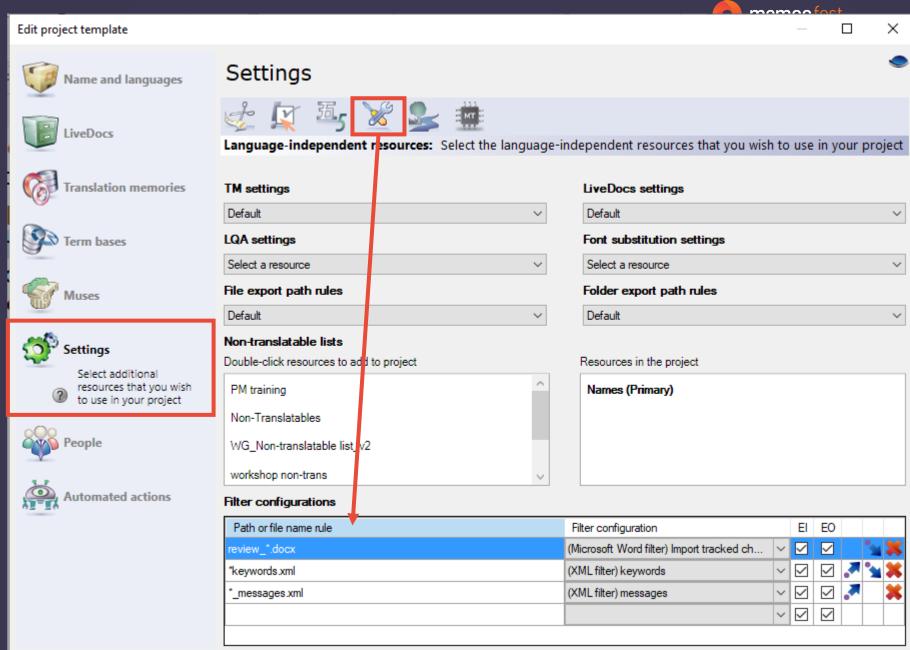

Filter selection according to file name

Project **Templates**

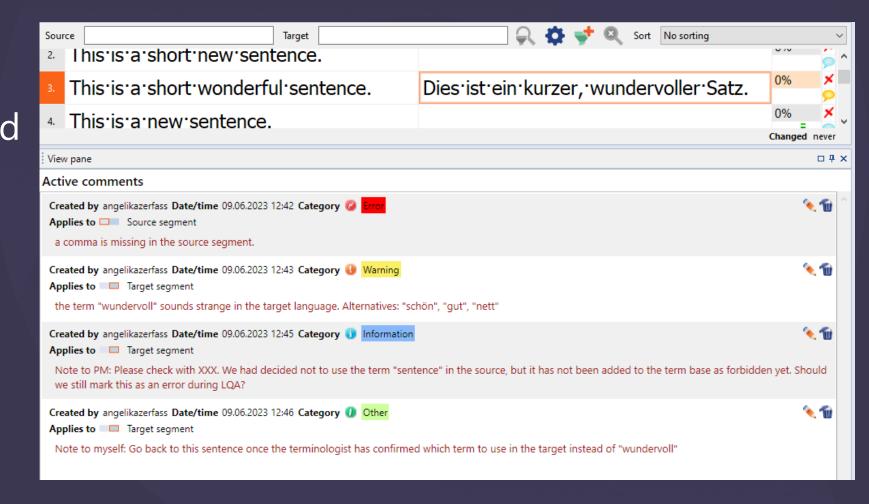

- Assign filters to files that contain a certain word in their names:
- review_*.docx
- *keywords.xml
- *_messages.xml

 Use comment categories in Word documents to differentiate between types of comments.

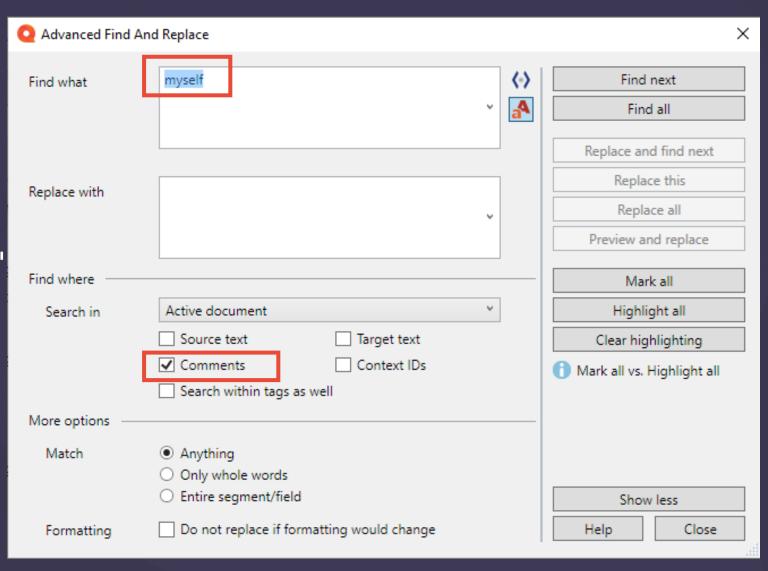

Using keywords like

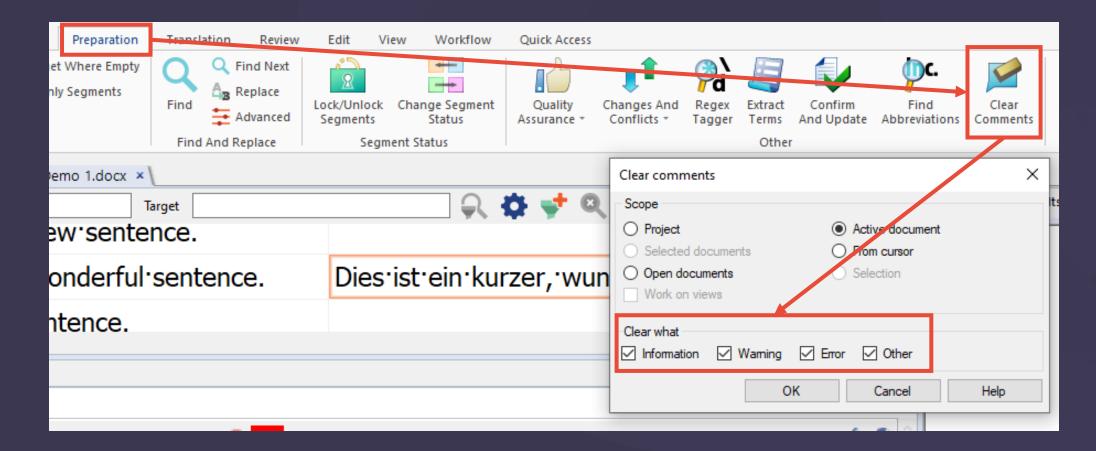

"not to myself" or "terminology question"

lets you find segments with specific text in a comment more easily.

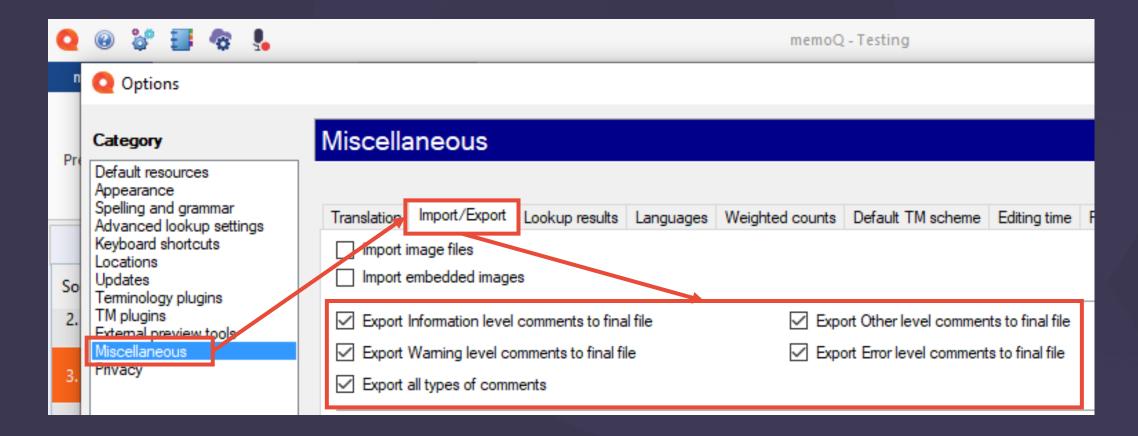

Decide which comment types to delete.

Decide which comments to keep in the exported Word document.

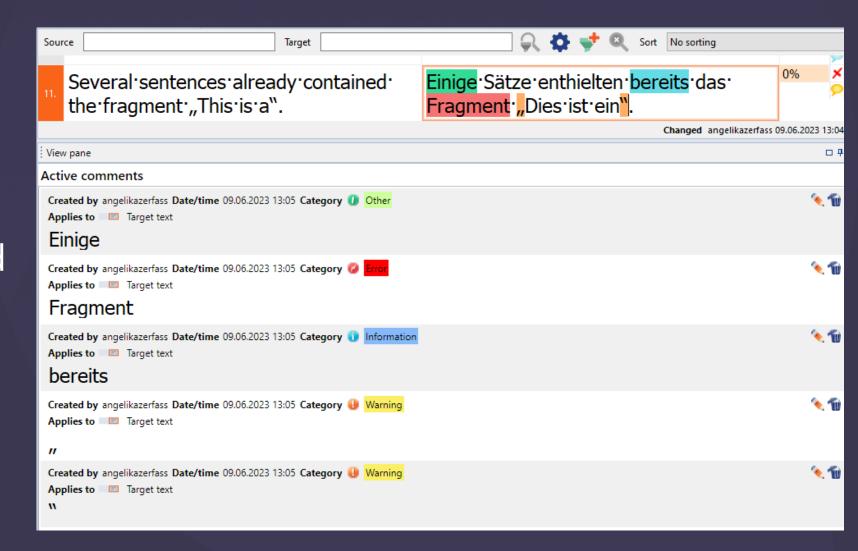

Highlights

 As highlights are treated as comments, you can use the categorization and deletion for highlights as well.

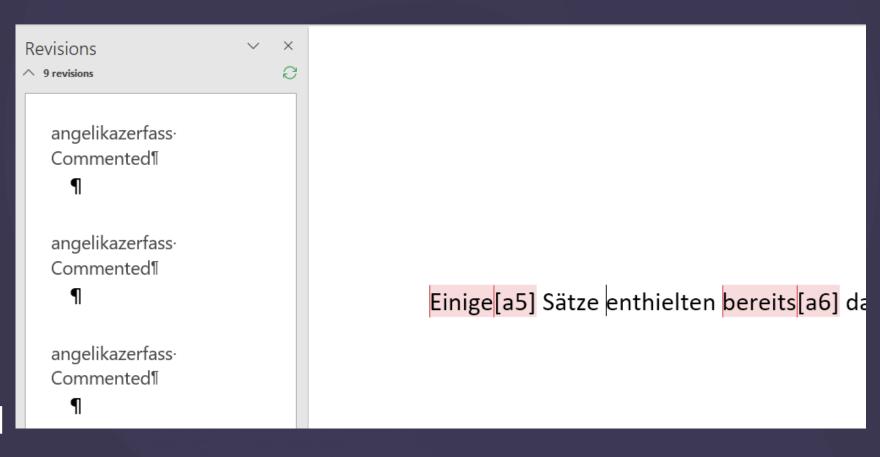

Highlights

 Note: Highlight colors do not export to the Word document, just the info "commented" appears in Word.

• It is useful to add comment text to the highlight.

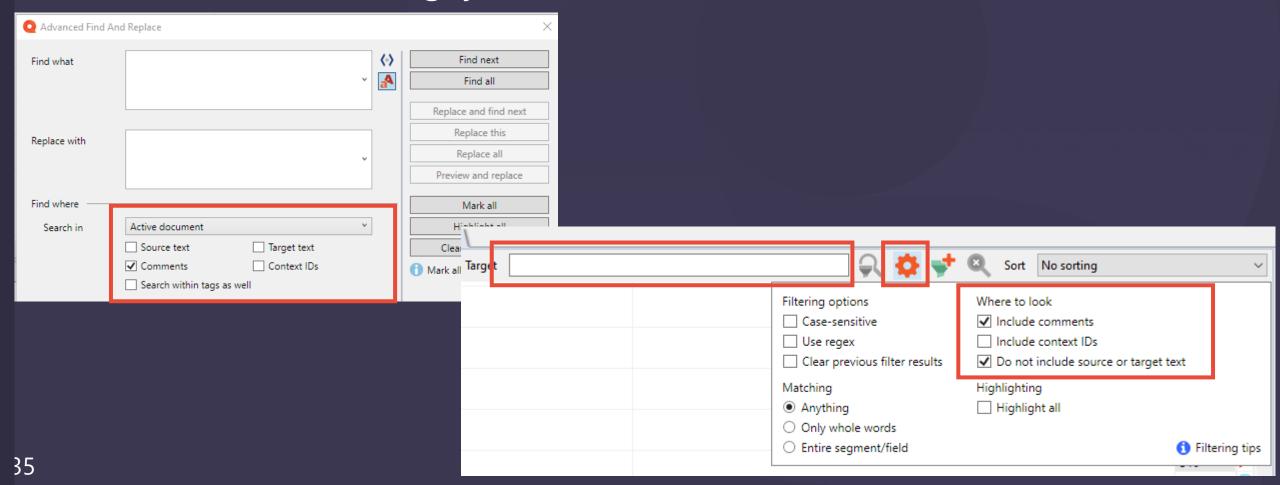

Settings for Searching and Filtering

• In the search dialog, you can select where to search.

Where to get more...

- Official memoQ blog
 - https://blog.memoq.com
- Several power users share their findings through their blogs, for example:
 - Kevin Lossner
 - https://www.translationtribulations.com/
 - You will also find lots of useful information on regular expressions
 - Marek Pawelec
 - https://wasaty.pl/blog/, E-books on memoQ, regular expressions
 - Lucile Danilov
 - https://locdandloaded.net/2022/05/23/memoq-tips/

And there are probably many many more details like these ©

Any questions?
