

# Server-to-Server Environments: The Path to Integration

**Alfredo Ortiz**

**Alfredo Ortiz**  
Engineering Manager

# Who is this dude?

- Physics graduate
- 25+ years experience in Localization including Tech Service leadership responsibilities.
- Track record of automation and workflow enhancement, performance optimization, and cross-functional improvement initiatives.

1

**History**

What were the changes that prompted this development

2

**Automation Objectives**

What were the objectives aimed to be achieved

3

**Solution Architecture**

What were the implemented components in each part to achieve the intended objective

4

**Workflows**

A high-level descriptive overview of the steps involved.

5

**Benefits**

How this automation has improved our work environment and the other benefits it brings.

6

**Challenges Ahead**

7

**Q&A**A decorative graphic consisting of several concentric circles in shades of orange and red, with a grid of small dots overlaid on the circles.  
**Agenda**

## Initial Scenario

### Client (**no** TMS) & Single LSP

- Client uses a single LSP
- Files were prepared at LSP side
- All assets are hosted on LSP server

History

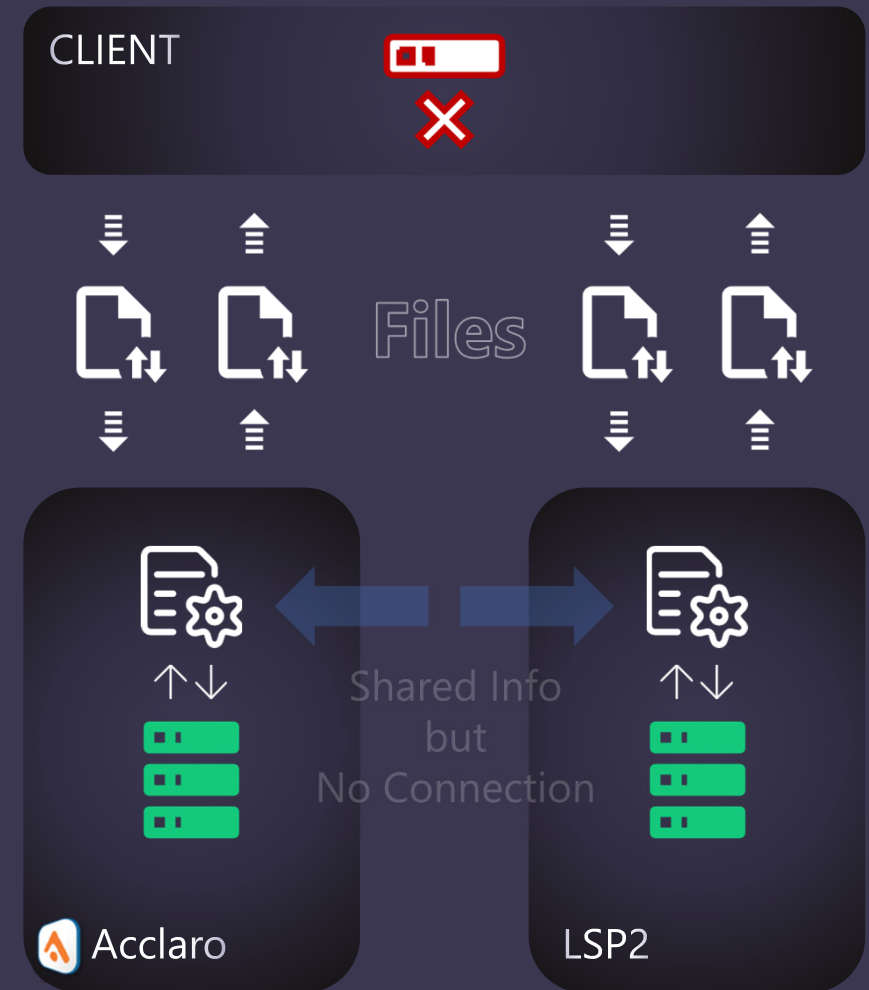

## First Environment change

### Client (**no** TMS) & Multiple LSP

- Client uses multiple LSPs
- Files are prepared at each LSP side
- All assets are hosted on each LSP servers

History

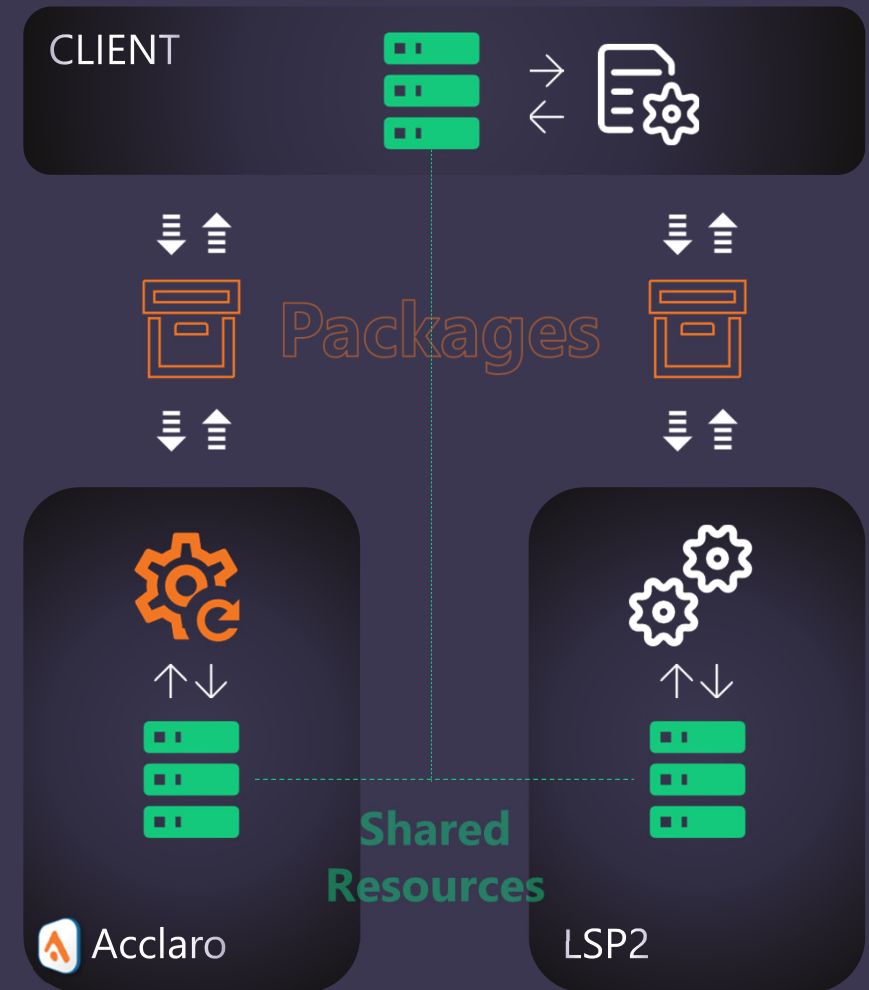

## Final Environment

### Client (**with** TMS) & Multiple LSP

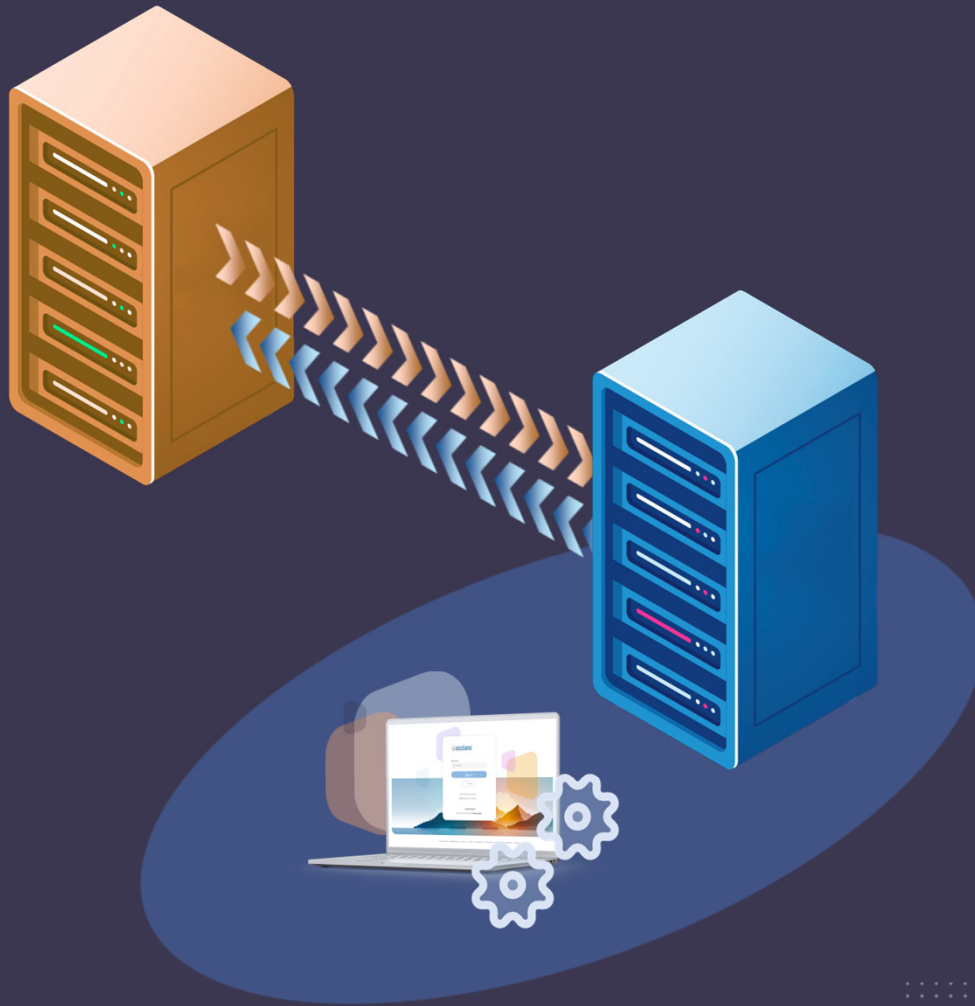

- Client uses multiple LSPs
- Files are prepared at each LSP side
- Some assets are hosted on client server

History

## General Objectives

- Packages Transfer
- Customized Import
- Automated Steps

## Automation Objectives

## Specific Acclaro Objectives

Synchronizations with:

- myAcclaro (Customer Portal)
- Acclaro Management System

## Automation Objectives

# Additional components to make it work

- 1 Servers Connection
- 2 Plugin installed at parent (client) and child (LSP) servers
- 3 FTP agents
- 4 memoQ templates (\*)

Solution Architecture

## Steps at client side

1. Project setup
2. Jobs assignments
3. Project Launch
4. Package Generation
5. FTP transfer

Automation Workflow

## Acclaro side (memoQ)

5. Package reception and detection
6. Analysis of Package content
7. Selection of appropriate settings
8. memoQ server importing
9. Automated actions (\*)

Automation Workflow

## Acclaro side (internal systems)

- 10. myAcclaro order creation
- 11. ERP order creation
- 12. Automatic Notifications

Automation Workflow

# Benefits of Integration at Client side

1

## **Assets/Process Ownership**

Client keeps the control

2

## **Shared Resources**

Potentially Accessible  
to all LSPs,  
improvements in cross-  
reuse

3

## **Continuous Asset Updates**

TMs and TBs hosted on  
client server  
Potentially Upgradable  
(during project circle)

4

## **Quicker Turn Arounds**

By Management  
Reduction and  
Smoother Exchanges

# Benefits of Integration at Acclaro side (1)

1

## **Time/Cost Savings**

At different areas, engineering, management,...

2

## **Scalability / Growth**

Lower Tech dependence improving scalability and opening the door to growth in volumes.

3

## **Quicker release to translation**

If additional requirements allow it, even be directly released to translation.

4

## **Stakeholder Collaboration**

Up-to-date status info for Global Acclaro team and Customer Key stakeholders

# Benefits of Integration at Acclaro side (2)

5

## **Automatic Notifications**

Enhance traceability and tracking

6

## **Automation Reports**

Detailed information for debugging purposes, if needed.

7

## **Systems Integration**

Ensures accuracy without human intervention

8

## **Human Errors Reduction**

Improves efficiency and reduces risks by integrating multiple systems

# Benefits of Integration at Linguist side (Quality)

1

## Collaboration

Depending on client preferences, child servers may

2

## Latest Assets Versions

Approved or reference content is hosted at client side (and accessed through child servers)  
Client has full control and can update this material on its convenience

3

## Consistency / Accuracy

Previous benefits drives directly to Quality improvements

1

## Assets refreshment in S2S connections

Removed resources in Parent server are lost forever in Child server

2

## Single user allowed per child server

The connection from one server to another is done through certificates and that blocks the creation of several user profiles in an S2S connection

3

## Fully functional Templates in S2S connections

Our integration is emulating templates at the programming level  
The expectation is to have functional templates in a not far future

# Addressing Challenges Ahead

# Thank you!
